

30-DAY KETO INDIAN PLAN

Ch 1: Keto Fundamentals

A ketogenic diet restricts carbohydrates to under 50g/day, shifting the body from glucose to ketones derived from fat. For Indians, going keto means replacing rice, roti, and dal with low-carb Indian alternatives without losing the flavours of desi cuisine.

Macro	Standard Keto %	Grams/day (2000 kcal)	Indian Vegetarian Sources
Fat	65–75%	145–165g	Ghee, coconut oil, paneer, nuts, avocado, heavy cream
Protein	20–25%	100–125g	Paneer, tofu, soya chunks, eggs, full-fat curd, cheese
Net Carbs	< 5%	< 25g	Leafy greens, cauliflower, brinjal, zucchini, mushrooms

Ch 2: Indian Food Swaps

The key to sustainable Indian keto is finding satisfying replacements for high-carb staples. The following swaps maintain cultural and flavour experience while keeping net carbs under 25g per day.

Keto Replacement	Net Carbs	High-Carb Original	Net Carbs	Carbs Saved
Almond flour roti (1 piece)	2g	Wheat roti (1 piece)	25g	23g
Cauliflower rice (1 cup)	3g	White rice (1 cup)	45g	42g
Coconut cream curry base	3g	Onion-tomato base (1/2 cup)	12g	9g
Erythritol/stevia halwa	2g	Sugar-based mithai (1 piece)	25–35 g	23–33g
Paneer tikka snack	2g	Samosa (1 piece)	20g	18g
Soya granules dry sabzi	5g	Chana dal (1 cup cooked)	28g	23g
Egg/paneer bhurji	3g	Poha (1 cup)	32g	29g

Ch 3: 4-Week Meal Plan

Week	Theme	Daily Net Carbs	Calorie Target	Key Focus
Week 1	Keto adaptation	20–25g	1800–2000	Enter ketosis; manage keto flu
Week 2	Fat adaptation	20–25g	1800–2000	Energy stabilises; hunger decreases
Week 3	Optimisation	15–20g	1700–1900	Deepen ketosis; introduce 16:8 IF
Week 4	Consolidation	15–20g	1600–1800	Maximum fat loss; sustain ketones

Sample Day Meal Plan

Meal	Food	kcal	Net Carbs	Protein
Breakfast 7 AM	3-egg bhurji in ghee + 1 almond roti + black chai	360	5g	22g
Lunch 12:30 PM	150g paneer butter masala (cream-based) + cauliflower rice	500	8g	28g
Snack 4 PM	Mixed nuts + string cheese + bulletproof coffee	290	3g	12g
Dinner 7:30 PM	Palak paneer (cream gravy) + 1 almond roti + salad	480	7g	30g
Pre-sleep	Whey isolate 30g + MCT tea	170	2g	25g
TOTAL		1,800	25g	117g

Ch 4: Keto Flu & Electrolytes

Keto flu (days 3–7) occurs because carbohydrate restriction causes rapid glycogen and water depletion, taking electrolytes with it. It is not a sign of failure — it is a sign you are entering ketosis. Management is entirely nutritional.

Keto Flu Remedies	
• Sodium:	add salt liberally; have 1–2 cups salted vegetable broth daily
• Potassium:	eat avocado, spinach, mushrooms; consider potassium chloride (No-Salt)
• Magnesium:	300–400mg magnesium glycinate before bed; prevents muscle cramps
• Hydration:	3.5–4 litres water daily; add a pinch of Himalayan salt per litre
• Headache:	usually sodium depletion — try warm salted lemon water first
• Fatigue (days 3–5):	normal transition; reduce workout intensity temporarily
• Constipation:	psyllium husk 10g/day + leafy greens + extra water

Ketosis Test Method	Cost	Accuracy	Target
Urine ketone strips	Very low (Rs 200/box)	Low once fat-adapted	Trace to moderate
Blood ketone meter	Moderate (Rs 1500 + strips)	High	0.5–3.0 mmol/L
Breath acetone meter	High (Rs 3000+)	Moderate	Correlation to blood ketones
Subjective symptoms	Free	Qualitative	Reduced hunger, mental clarity

Ch 5: Vegetarian Protein Strategy

The biggest challenge of vegetarian keto is hitting protein targets (1.6–2g/kg) while staying under 25g net carbs. Most high-protein Indian foods like dal and legumes are also high in carbs. Focus on the following keto-compatible protein sources.

Food	Serving	Protein	Net Carbs	Keto Status
Paneer (full fat)	100g	18g	1.2g	Excellent — unlimited
Soya chunks (dry)	50g	26g	8g	Good — use daily
Whole eggs	3 eggs	18g	1g	Excellent — no limit
Tofu (firm)	150g	25g	3g	Excellent — use freely
Full-fat curd	200g	7g	6g	Good — 1–2 cups/day
Whey isolate	30g scoop	24g	1–2g	Excellent — use daily
Moong dal (cooked)	1 cup	14g	20g	Moderate — limits carb budget
Rajma/Chana (cooked)	1 cup	15g	28g	Avoid on strict keto

Ch 6: Exercise on Keto + Results Tracker

Exercise Type	Performance on Keto	Recommendation
Heavy resistance (1–8 reps)	Slight decrease weeks 1–2	Add 10–25g carbs pre-workout (targeted keto)
Moderate hypertrophy (8–15 reps)	Maintained after week 2	No modification needed after adaptation
LISS endurance cardio	Excellent once fat-adapted	Best exercise for keto; prioritise LISS
HIIT / Sprints	Significantly impaired	Avoid or use targeted/cyclical keto
Yoga / Mobility	Unaffected	Ideal keto activity — no glucose dependency

Metric	Day 1	Day 7	Day 14	Day 21	Day 30
Weight (kg)					
Waist (cm)					
Ketone level (mmol/L)					
Energy (1–10)					
Hunger (1–10)					
Workout performance (1–10)
