

WOMEN'S COMPLETE BODY TRANSFORMATION

Ch 1: Body Recomposition vs Weight Loss

Body recomposition simultaneously loses fat and gains muscle — the true transformation goal. Unlike simple weight loss, recomp changes your body SHAPE. The scale may not move much, but your clothes fit differently and your reflection changes dramatically.

Approach	Scale Weight	Fat Mass	Muscle Mass	Body Shape Result
Calorie restriction only	Drops fast	Decreases	Also lost — muscle wasted	Smaller but same soft shape
Cardio only	Drops moderately	Decreases	Some muscle lost	Smaller; still lacking definition
Strength training only	Stays same or rises	Decreases	Increases significantly	Firmer, more defined, curves
Body recomp (this plan)	Stays same or slight rise	Significant decrease	Significant increase	Completely transformed physique

Ch 2: 12-Week Training Programme

Phase	Weeks	Sessions/Week	Training Focus	Key Exercises
Foundation	1–3	3 full body + 2 cardio	Movement patterns; perfect form	Goblet squat, push-up, DB row, glute bridge, plank
Build	4–6	3 strength + 2 LISS	Progressive overload begins	DB squat, DB bench, lat pulldown, RDL, hip thrust
Sculpt	7–9	4 strength + 2 HIIT	Volume accumulation + isolation	Barbell squat, bench, deadlift, cable glute work
Shred	10–12	5 sessions + 3 HIIT	Maximum intensity	Full compound programme + HIIT metabolic finishers

Glute & Lower Body Protocol (Most Requested)

Exercise	Sets x Reps	Key Technique Cue	Progressive Overload
Barbell Hip Thrust	4 x 10–12	Full glute squeeze at top; 2-second hold	Add 2.5 kg when 12 reps feel controlled
Romanian Deadlift	3 x 10–12	Push hips back; feel hamstring stretch throughout	Add 2.5 kg each week
Bulgarian Split Squat	3 x 10/side	Front foot forward; slight forward lean of torso	Add DBs when bodyweight is mastered
Cable Kickback	3 x 15/side	Hip extension only — no knee flexion; slow and controlled	Increase cable weight each 2 weeks
Sumo Squat	4 x 12	Toes out 45 degrees; sit back and down into hips	Add weight as form allows
Abductor Machine	3 x 20	Full range; 1-second squeeze at peak abduction	Increase weight monthly

Ch 3: Nutrition for Body Recomposition

Body recomp requires eating at or near maintenance calories — a moderate deficit on rest days, maintenance or slight surplus on training days. This allows simultaneous fat loss and muscle gain through nutrient partitioning enhanced by training.

Day Type	Calorie Target	Protein	Carbs	Fat
Rest days	TDEE minus 300–400 kcal	2.0–2.2 g/kg BW	1.5–2.0 g/kg BW	0.8 g/kg BW
Training days	TDEE or slight surplus	2.2 g/kg BW	2.5–3.5 g/kg BW (peri-workout)	0.7 g/kg BW
High-volume days (legs)	TDEE plus 100–200 kcal	2.2 g/kg BW	3.0–4.0 g/kg BW	0.7 g/kg BW

Sample Training Day Meal Plan (60 kg woman, 1900 kcal)

Meal	Food	kcal	Protein
Breakfast 7 AM	3 egg whites + 1 whole egg bhurji + 1 roti + chai	340	24g
Mid-morning 10 AM	1 cup curd + 1 fruit (apple/banana) + 5 almonds	220	8g
Lunch 1 PM	100g paneer curry + 1 cup rice + sabzi + kachumber	490	26g
Pre-workout 4 PM	Banana + 25g whey isolate	220	22g
Post-workout 6 PM	50g soya chunks + 1 cup curd	260	28g
Dinner 8 PM	100g tofu bhurji + 1 roti + dal soup	370	22g
TOTAL		1,900 kcal	130g

Ch 4: Mindset & Managing Social Pressure

Navigating Indian Social Pressure Around Food and Body	
• Aunties commenting on weight: "I am working on my strength and health, thank you for noticing"	
• Family insisting extra servings: "Your food is delicious Maa — I am full but grateful"	
• Matrimonial pressure around appearance: your fitness is for YOU, not for approval	
• Friends eating off-plan: order mindfully; you can be social AND committed to your goals	
• Scale not moving: take measurements and progress photos — recomp shows there first	

12-Week Transformation Tracking

Metric	Week 1	Week 4	Week 8	Week 12
Body weight (kg)				
Waist circumference (cm)				
Hip circumference (cm)				
Hip thrust max weight (kg)				
Push-up max reps				
Energy level (1–10)
